

Adobe Acrobat Connect Pro (formally Macromedia Breeze)

Using Adobe Acrobat Connect Pro, you and other meeting attendees can join a live, on-line meeting from anywhere in the world, as long as you have a browser, Adobe Flash Player plug-in, and an Internet connection. A meeting can have as few as two or as many as several hundred attendees.

A meeting room is an online application that you join by navigating to a specific URL with a browser. Once in a meeting, you can see and hear various types of media, such as a live video broadcast of the Presenter, a Microsoft PowerPoint presentation, or a video. In real time, Presenters can demonstrate software on the computer or use a whiteboard to draw or annotate images or text.

An Adobe Connect Pro meeting room exists before a scheduled meeting time and continues to exist after the scheduled meeting time has passed. A meeting room can be used over and over. The Host can leave the meeting room open or closed between scheduled meetings. If a meeting room is open between meetings, you can enter the room at any time to view content or meet with other group members.

Adobe Presenter 7
